PROJECT: CATT

This game is an RPG where the user plays the role of a wandering cat who finds joy in connecting with other cats. After logging in (and reading the backstory), you can click on different cats on the game screen to interact with them. By interacting with different cats, the user is able to gain affection points, raise affection levels, and receive interesting gifts. When exchanging dialogue with cats, the user can also encounter fun options, like trivia or jokes. Encounters cost energy, which is replenished daily. Utilizing the weather API, based on New York City's weather (shown as an icon on the interface), the user can encounter cats of different regions. Encounter all the cats to get a prize!!

FEF: BOOTSTRAP

COMPONENTS

- Sessions
 - Register
 - Takes in username and password as long as the username isn't taken
 - Login/Logout
 - Takes in username and password
 - Accesses database of usernames and passwords for each user to log in
 - Use sessions to keep a user logged in and only log them out if they press a logout button
 - User doesn't have to be logged in to use our site, but progress will not be saved
- Webpages
 - Startscreen
 - <click to start>
 - Gives a prompt for logging in or signing up if not yet logged in
 - *Character selection (?) for cat sprite*
 - *Brief lore/backstory to the cat and the game (?)*

Legend
Italic = optional / additional features
Underline = keywords / important

- *Black screen, just the character in the middle, text box on the bottom*
 - *Skip story button if you've already seen it and want to skip it*
- Weather based encounter maps
 - Webpage templates will be made completely out of placeholders/variables
 - *Weather + icon will be displayed in the top left corner of the screen*
 - Access database of content based on the weather and display it
 - Cats that appear will be based off the energy level set for the weather map
 - Different weather = different cats!!!!
 - Cats will be buttons
 - Click on cat to get an encounter
 - *Bootstrap progress bar.....*
- Encounters
 - Your cat sprite and the other cat
 - Click on other cat to begin dialogue
 - Tell jokes, ask trivia questions
 - Answering right or clicking the right response will give you affection points/gifts from the cats
 - Will have a level system so points are of significance to the player, perhaps a multiplier applied to future interactions (?)
 - *Cat will say evil insults if you do something bad*
 - Encountering all the cats will play a CSS animation where cats spawn on the screen one by one and say something nice about you (*or smth related to the backstory*)
- Profile page
 - See all the cats you've encountered, affection points/gifts, *area completion (?)*, etc.
- Database (SQL)
 - Stores all webpages and data
 - DATABASE TABLE FOR USER INFO:

USER_PROFILE

TEXT	username	PK (unique)
TEXT	password	
TEXT	sprite	

■ DATABASE TABLE FOR ENCOUNTER MAPS:

ENCOUNTER_MAPS		
TEXT	background	
INTEGER	num_cats	
INTEGER	energy_lvl	
TEXT	weather	

■ DATABASE TABLE FOR USER ENCOUNTERS:

USER_ENCOUNTERS		
TEXT	username	
TEXT	cat	
INTEGER	affection	
INTEGER	level	

■ DATABASE TABLE FOR ENCOUNTER DIALOGUE:

DIALOGUE		
TEXT	encounter_type	
TEXT	response1	
TEXT	response2	
TEXT	response3	
TEXT	response4	

■ DATABASE TABLE FOR JOKES:

JOKES		
-------	--	--

TEXT	category	
TEXT	joke	
INTEGER	difficulty	
TEXT	desired_response	

■ DATABASE TABLE FOR TRIVIA:

TRIVIA		
TEXT	difficulty	
TEXT	answer1	
TEXT	answer2	
TEXT	answer3	
TEXT	answer4	
TEXT	correct_answer	

■ DATABASE TABLE FOR CATS:

CATS		
TEXT	breed	
INTEGER	energy_lvl	
INTEGER	difficulty	
INTEGER	response_type	

■ Response_type = 0 for jokes

■ Response_type = 1 for trivia

- HTML templates
 - Login/Register
 - Takes user input via forms
 - Logout page
 - Encounter maps
 - Template for every weather map
 - Encounters
 - Takes user input via button clicks

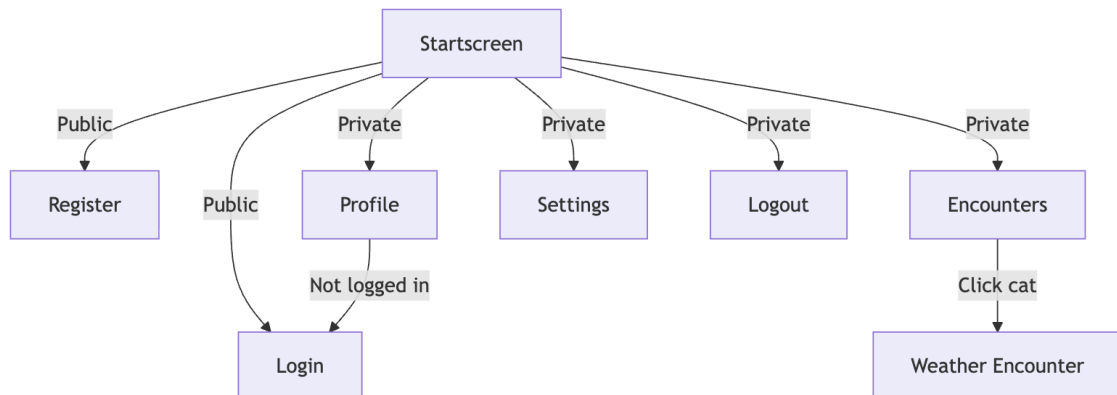

- Must return data and update content upon click
- Profile page
- *Settings page (to change minor settings)*
- APIs
 - [Cat API](#)
 - Will get cat breeds, energy levels, *and cat images*
 - Cats provided randomized through use of the API
 - [Joke API](#)
 - Get jokes for cats
 - [Pirate Weather API](#)
 - Get weather based on location (configurable)
 - [Trivia API](#)
 - Difficulty can vary based on breed of cat
 - [Evil Insults API](#)
- FEF
 - [Bootstrap](#)
 - Responsive features & formatting system
 - Select dropdown for dialogue response
 - Checkboxes for settings page
 - *If you didn't want to use the weather API, you can use Bootstrap range to select random number*
 - Badge heading, when encountering a new cat
 - Cards for cats you've already encountered on profile page
 - List group / popovers for appearing dialogue
 - Containers, for formatting the game's UI
 - Form styling, for use in login
 - Disabled forms?
 - Floating labels, validation for login/register page!!
 - Color system (consistent color scheme)
 - Navbar functionality

FEF Site Map

Startscreen (PRIVATE)

- | └ main game interface, where you start playing the game and can
- | access other features
- | └ redirect to Login if not yet logged in

- | **Login** (PUBLIC)
 - | └ redirects to Startscreen / Profile
- | **Register** (PUBLIC)
 - | └ redirects to Startscreen / Profile
- | **Profile** (PRIVATE)
 - | └ includes all data of user, including username, collection progress, energy level, etc.
- | **Encounters** (PRIVATE)
 - | └ encounter page where player can click cats on screen to have encounters (randomly generated cats)
 - | └ **Weather Encounter** (PRIVATE)
 - | └ utilizes the weather API's energy level (within a specific range of temperatures) to randomly select a cat
- | **Settings** (PRIVATE)
 - | └ page to switch settings (i.e. turn on/off weather encounters)
- | **Logout** (PRIVATE)
 - | └ redirects to Login
